## Pressure Transmitters for General Purpose

### Description

The 131C is a general-purpose pressure transmitter made from the BCM ceramic pressure sensor. This model is developed for applications of processing and control operations involving aggressive media. To meet requirements of high corrosion resistance, the transmitter can have its process connection made from PVDF (polyvinylidene fluoride). With numerous options of process connection and electrical interface, the 131C can fit most industrial pressure measurement applications.

The 131C consists of a ceramic diaphragm, stainless steel or PVDF wetted part, and stainless steel housing. The transmitter features an inner-cavity process connection to measure pressure of gases or dilute fluids with gauge pressure reference.

By selecting proper electrical interface, the 131C is able to reach the environmental protection rating up to IP67.

### Features

- high chemical resistance
- measuring ranges: 2bar, ..., 400bar
- selectable output:  
4~20 mA (standard), 0.5~4.5V ratiometric and others.
- wide choice of process connection and electrical interface
- protection rating up to IP67

### Applications

- chemical industry
- medical instrument
- hydraulics and pneumatics
- liquid level measurement
- process control
