

Reliable bearing solutions for corrosive environments

Stainless steel deep groove ball bearings

Longer service life in a severe environment

Open or sealed

Available from stock

SKF

Stainless steel deep groove ball bearings for increased reliability

Stainless steel deep groove ball bearings

The bearings

SKF stainless steel deep groove ball bearings, like their standard steel counterparts, have deep raceway grooves without filling slots and a close osculation between raceways and balls. For this reason they can carry axial loads acting in both directions in addition to radial loads, even at high speeds. They have the same running properties as standard steel bearings, but with slightly reduced load carrying capacity. SKF stainless steel deep groove ball bearings are available in several designs and sizes, and they are identified as stainless steel by the designation prefix W (→ "Range and designs").

Benefits

The main advantage of SKF stainless steel deep groove ball bearings is their resistance to corrosion in moisture and other corrosive environments. They are also highly versatile since the sealed versions can be supplied with different grease fillings. This allows the choice of the most suitable grease for each application, for example, the use of food compatible, non-toxic bearing grease for the food industry. SKF bearings are temperature-stabilized at 150 °C but can be used up to 300 °C

depending on the lubricant used.

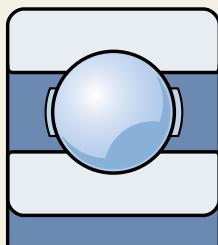

Applications

SKF stainless steel deep groove ball bearings are recommended for use wherever resistance to corrosion is a factor. Typical applications include:

- Food and beverage industry
- Chemical equipment
- Medical equipment
- Optical instruments
- Printing machines
- Nuclear technology
- Engines and pumps
- Paper mills
- Off-shore
- Marine industry

Range and designs

SKF stainless steel deep groove ball bearings were formerly available up to a maximum bore diameter of 10 mm. The line has been expanded with the series W60, W62 and W63, offering new possibilities to design engineers having requirements for bearings with bore diameter up to 50 mm.

SKF stainless steel deep groove ball bearings are available in the following designs:

- open (→ **fig 1**),
- with non-contact Z shields (→ **fig 2**),
- with contact RS1 seals (→ **fig 3**),

and on request also with

- RS2 seals of fluoroelastomer rubber or
- low-friction RZ seals.

In addition, SKF stainless steel deep groove ball bearings can also be supplied

- for shaft-diameters of 0,6 to 9 mm
- for inch shaft-diameters of 0,04 to 0,75 in
- with flanged outer ring
- as thin section bearing.

Information about these bearings can be found in the "SKF Interactive Engineering Catalogue" on CD-ROM or online at www.skf.com.

Bearing data - general

Dimensions

The boundary dimensions of metric stainless steel deep groove ball bearings conform to ISO 15-1998.

Tolerances

Metric stainless steel deep groove ball bearings are manufactured to Normal tolerances corresponding to ISO 492-2002.

Internal clearance

SKF stainless steel single row deep groove ball bearings are manufactured as standard with Normal radial internal clearance to ISO 5753-1991, but bear-

ings with greater or smaller clearance can be supplied on request.

The values for radial internal clearance are given in **table 1** and are valid for unmounted bearings under zero measuring load.

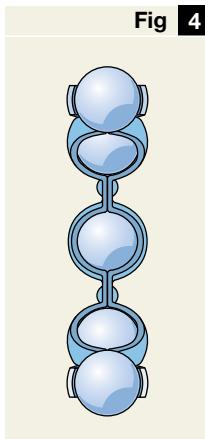

Materials

The bearing rings are produced from stainless steel X65Cr14 according to ISO 683-17:2000 or X105CrMo17 according to EN 10088-1:1995, depending on size. The balls are made of stainless steel X105CrMo17 and the shields and cages of stainless steel X5CrNi18-10, both according to EN 10088-1:1995.

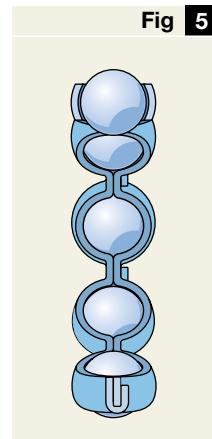

Radial internal clearance

Table 1

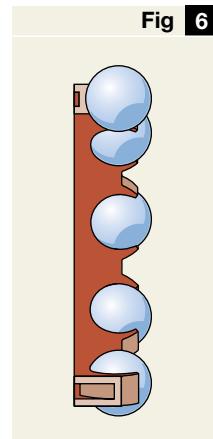

Bore d over incl.	Radial internal clearance						C3 min	C3 max	C4 min	C4 max	C5 min	C5 max
	C2 min	C2 max	Normal min	Normal max								
mm	µm

30	40	1	11	6	20	15	33	28	46	40	64	
40	50	1	11	6	23	18	36	30	51	45	73	

Riveted cage

Ribbon-type cage

Polyamide cage

Cages

The bearings are equipped as standard with a riveted cage of pressed stainless steel sheet (→ fig 4). On request they can also be supplied with the following cage types:

- Riveted brass sheet cage
- Ribbon-type cage of steel sheet (→ fig 5)
- Ribbon-type cage of brass sheet
- Injection moulded cage of polyamide 6.6 (→ fig 6).

Greases for sealed bearings

Characteristics	Standard grease	Special grease, food-compatible	Special grease for high temperature	Table 2
Thickener	Lithium soap	Aluminium complex soap	PTFE	
Base oil	Mineral oil	Polyalphaolefin	Fluorinated oil	
Operating temperature, °C (continuous operation)	-30 to +110	-25 to +120	-35 to +260	
Kinematic viscosity of base oil, mm²/s at 40 °C at 100 °C	74 8,5	150 15,5	400 35	
Dropping point, °C	180	290	-	
Consistency class (according to NLGI)	2	2	2	

and seal tightly. The RS1 seals are made of an oil and wear resistant acrylonitrile butadiene rubber (NBR), have a sheet metal reinforcement and can be used at operating temperatures between -40 and +100°C and up to 120°C for brief periods. They protect the bearing reliably against moisture and dirt and prevent the leaking of grease.

Speed ratings

The permissible rotational speeds depend on the type of the built-in sealing and the lubrication. The values are given in the product table.

Grease filling

Bearings with shields or seals as standard are filled for life with a lithium grease that shows good rust-inhibiting properties and is suitable for temperatures between -30 and +110 °C. These bearings are maintenance free. The grease quantity fills about 25 to 35 % of the free space in the bearing. Details of this grease will be found in table 2.

Other lubricating greases can be supplied on request, for example, for other temperature ranges or, for use in the food industry (→ table 2).

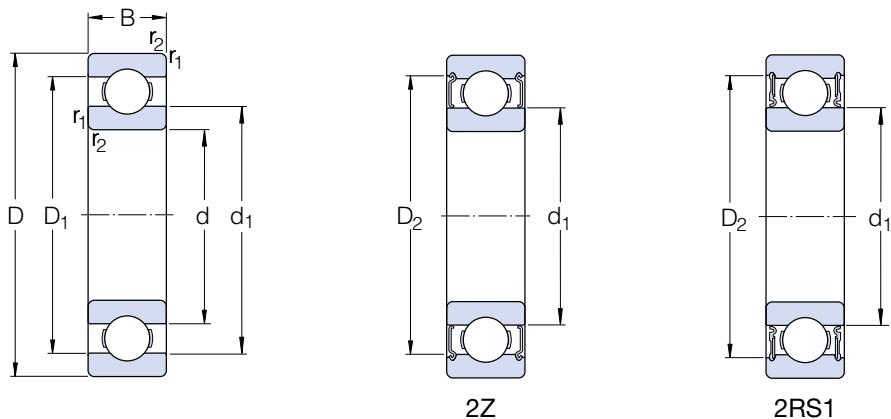

Lubrication of open bearings

For open bearings, SKF recommends lubrication with one of the approved and application-proven dependable SKF bearing greases:

- Grease LGMT 2: all-purpose bearing grease for a wide range of industrial and automotive applications.
- Grease LGLT 2: low temperature bearing grease for high speed and low noise applications.
- Grease LGLC 2: low temperature bearing grease for high speed and medium load applications.
- Grease LGHQ 3: high temperature and low noise bearing grease.
- Grease LGFP 2: food processing bearing grease USDA H1.
