

Features of AWEMA LWT-Weigher, manufactured with Swiss quality:

- Fully electrical operation, no compressed air required
- Stainless steel execution
- Easy cleaning. No tools required to dismantle the parts which are in direct contact with the product
- Touch screen operation with color graphic display
- More than 500 recipes can be stored
- Trending software Algorithm to improve accuracy and speed of the weighing process
- A selectable number of part weight discharges can build the final weight. This prevents product jam in the runout system.
The last part weight is calculated as amendment to the previous part discharges to reach best final weight tolerance
- Variable frequency and amplitude control of the vibrators guarantee a smooth and even product flow on the vibrator chutes.
- Production speed up to 20 discharges/min, depending on target weight and final weight tolerance
- Automatic Zero Tare while in automatic operation
- Synchronization signals provided for connection to bag maker machines (Automatic operation)
- Comprehensive statistic information about discharged weights
- Integrated WLAN and LAN connection
- Remote connection ready for remote maintenance
- Infeed signals provided to control the level of the hopper with optional sensors.
- Weighing pan opening can be programmed for speed and angle
