

Brabender MetaBridge® Controller

For the intelligent networking of your
Brabender instruments

... where quality is measured.

MetaBridge Controller

The software that interconnects

The Brabender MetaBridge is an integrated software solution that interconnects your Brabender instruments with users and with each other. This enables users to access any instrument at any time within and without the laboratory and operate several instruments simultaneously as well. Furthermore, it is particularly easy to access and evaluate measurement readings.

Independent of the connected device, the MetaBridge enables you to monitor your readings live and record them simultaneously – from anywhere in the world.

As the software is web-based, it is platform-independent. This enables more than one user to log in at the same time and access the MetaBridge from any place, no matter the distance. A reading can be retrieved on a computer, tablet or smartphone, provided the technical parameters are in place.

MetaBridge-compatible devices

- Farinograph-E (USB)
- Farinograph-AT
- Extensograph-E (USB)
- Amylograph-E
- Viscograph-E
- Micro Visco-Amylo-Graph (MVAG)

More information:
Brabender MetaBridge

One system for all applications

The newly developed Brabender MetaBridge Controller MBC enables you to upgrade your existing Brabender instruments to the networkable, web-based MetaBridge software. The user-friendly design for intuitive operation and the compatibility with all current tablets, smartphones and PC operating systems expand the utility potential of your instrument, e.g. the Farinograph-E (USB).

The integration of the MBC into your company network and a network account ensure a password protected access from outside. Furthermore, it is possible to set up an internal laboratory network with several interconnected instruments.

Purchasing a MetaBridge compatible Brabender instrument (see blue box) we recommend to combine it with the MBC and hence with the MetaBridge software.

Your benefits:

Live monitoring of measurements: Whether being in the laboratory, in your office or on a business trip: You are always connected with your laboratory and thus able to take decisions quickly and just-in-time.

Central storage and administration of measurement data: You are out and about, but you need readings from older measurements? The MBC allows easy access to your data, being protected from unauthorized access.

Cost optimization: No installation required. One controller box for up to four instruments, easy data access using your tablets, smartphones and PCs.

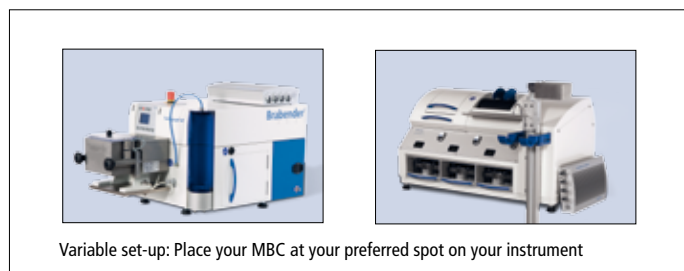

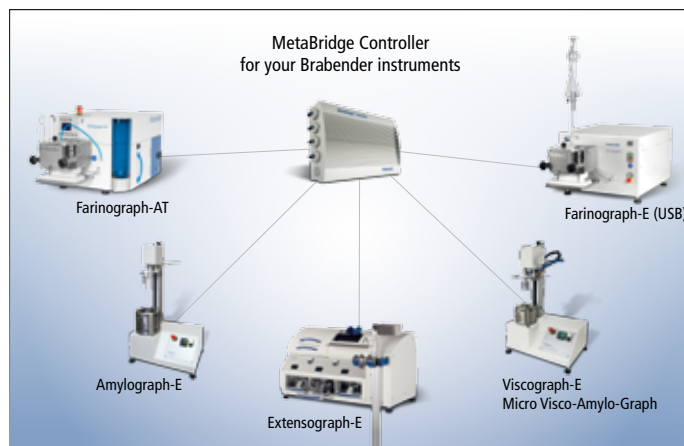

Further benefits

- Usable with touchscreen as well as with mouse and keyboard
- Well-structured and functional user interface
- Several users can log-in simultaneously
- Automatic update notification
- Brabender support via remote access
- Easy data export, e.g. via e-mail or PDF
- Integrated button for initiating contact with Brabender

Software compatibility

The MetaBridge is compatible with all currently available tablets and smartphones with a screen resolution of 1024 px.:

- Apple iOS, iPhone / iPad / Mac
- Windows 10, 8, 7, XP
- Android: all versions
- Linux: all versions
- Blackberry

MetaBridge Controller	
Connections	4 USB, 1 HDMI, 1 LAN
Main connection	1x 230 V; 50/60 Hz + N + PE; 1,85 A 115 V; 50/60 Hz + PE; 3,5 A
Dimensions (W x H x D)	without plugs: 370 x 65 x 215 mm with plugs: 500 x 65 x 215 mm
Weight	3.9 kg net
