

- Squeeze-out unit suitable for 310 ml Euro cartridges
- Integrated pressure controller 0 to 3.5 bar
- Available on request incorporated into unit or with attached manual handle
- Special adaptor for the processing of plastic tubes

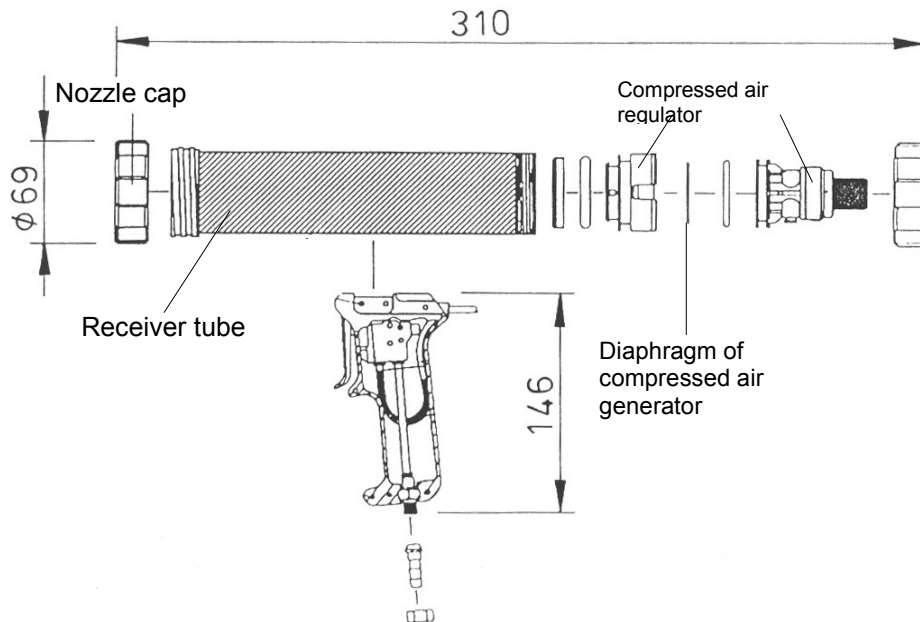

The cartridge gun is ideal when working with 310 ml Euro cartridges or plastic tubes. In combination with the attached handle with integrated pneumatic valve, it becomes a reliable low-cost alternative for single point and bead dispensing.

For high-quality metering and automatized use we recommend you chose the squeeze-out device incorporated into an unit and to combine it with an appropriate metering valve. Thus, accurately reproducible metering quantities and neat treatment without draining become possible.

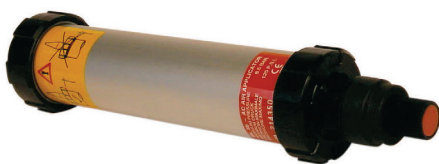

Technical data:

Cartridge dispensing	310 ml Euro standard
Cartridge diameter	max. 45 mm
Cartridge length	max. 215 mm
Compressed air connection	R 1/4" - hose Ø 6 mm
Supply pressure	max. 8.5 bar
Adjustment range	0 to 3.5 bar
Weight	680 grams
