**ENERGY-SAVING motors**

# THE SOLUTION FROM INDUSTRY: HIGH-EFFICIENCY MOTORS

*D*uring International Conferences, countries have shown their **WILLINGNESS** to commit to a further reduction in greenhouse gas emissions into the atmosphere.

Increased energy efficiency is a major factor in controlling electricity consumption, which is responsible for 30% of the (CO<sub>2</sub>) emissions in the European Community.

The future of our planet depends on a partnership approach to energy saving by all **PRODUCERS** and **USERS** of energy.

 **LEROY<sup>®</sup>  
SOMER**

EFF 1

 LEROY<sup>®</sup>  
SOMER :

MASTERY OF ENERGY

# ENERGY-SAVING LEROY-SOMER'S COMMITMENT

## OUR INTERNATIONAL DUTY

Energy is essential to industry, to competition and to jobs.

Economic growth and energy consumption are becoming the two main guiding forces in the rational use of energy and preservation of the environment.

***Electric motors represent nearly 70% of electrical consumption in industry.***

### **NORTH AMERICAN LAWS**

Since October 1997, LEROY-SOMER's special ranges of induction motors, in aluminium and cast iron, have met the requirements of NORTH AMERICAN LAWS:

- **EPCA for the United States**
- **NRCan for Canada**

### **EUROPEAN ACCORD**

In April 1999, LEROY-SOMER undertook to comply with the ACCORD SIGNED under the auspices of the European Commission to promote high-efficiency electric motors.

LEROY-SOMER is also participating in the United Kingdom's project (ECA: Enhanced Capital Allowance) which encourages industrial firms to invest in energy-saving technologies from 1<sup>st</sup> April 2001.

# ENERGY-SAVING CUSTOMER BENEFITS

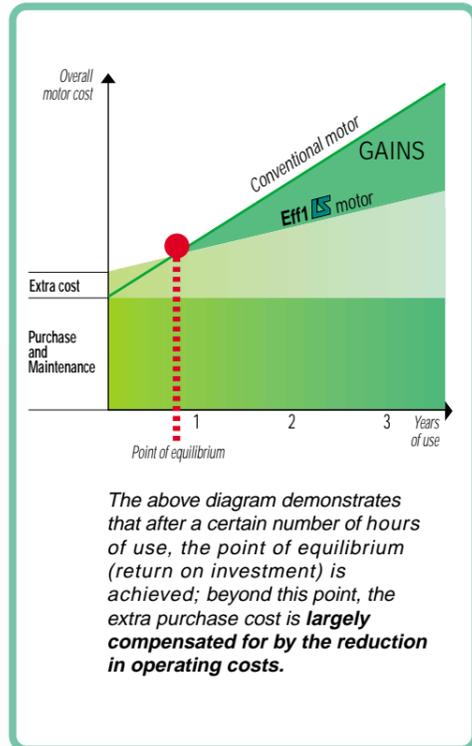

## REDUCED OPERATING COSTS

The actual cost of a motor during its lifetime (generally over 10 years) consists of its purchase price (2 to 3%), the cost of servicing and maintenance (1 to 2%), but primarily the cost of the energy it consumes (> 95%).

As LEROY-SOMER LS ES and FLS ES (Eff1) motors consume less energy, the related operating costs are considerably reduced.

- **Example of the 45 kW motor**  
(currently installed in heavy industry, for example)  
Using a conventional motor:  
- Efficiency = 91.5%, ie. absorbed power = 49.2 kW
- **LEROY-SOMER FLS ES motor:**  
- Efficiency = 94.5 %, ie. absorbed power = 47.6 kW
- **GAIN : 1.6 kW**
- **ANNUAL SAVINGS:**  
 $1.6 \text{ kW} \times 0.35\text{F}^* \times 8000 \text{ hrs/yr} = 4480 \text{ F per year (682.9 €)}$   
\* (price of kW/h)

The extra cost of the "energy-saving motor" pays for itself in less than 10 months.

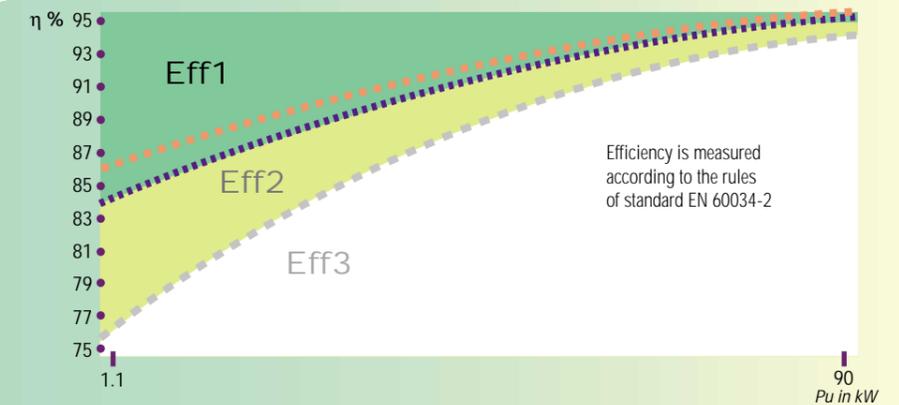

# ENERGY-SAVING EUROPEAN ACCORDS

LEROY-SOMER are manufacturing a new generation of **HIGH-EFFICIENCY INDUCTION MOTORS**, conforming to the **EUROPEAN ACCORD** signed with the European Energy Commission.

## CONTRACTUAL EFFICIENCY VALUES at 50 Hz

## RANGES CONCERNED

2 or 4-pole motors, 3-phase, from 1.1 to 90 kW, 400 V, 50 Hz, S1 duty .....	EN 60034-1
IP54 and 55 .....	EN 60034-5
Ventilated IC 411 .....	EN 60034-6
Type N .....	EN 60034-12
Frame size 90 to 280 .....	IEC 60072-1
foot mounted and / or flange (FF) or face (FT) mounted	
With or without protection and / or heating accessories.	

## INCREASED MOTOR SERVICE LIFE

The increased efficiency of motors manufactured by LEROY-SOMER is the result of:

- Elongation of the magnetic circuit
- Use of laminations with very low losses
- Optimisation of the winding geometry
- Reduction of ventilation losses

MINIMISED LOSSES

REDUCED TEMPERATURE RISE

INCREASED SERVICE LIFE

THE OFFER  
**LEROY-SOMER**

LEROY-SOMER have undertaken a complete overhaul of their conventional induction motor range and now offer, since January 2000, two new ranges of products bearing the Eff2 and Eff1 labels.

- LS and LS ES: Aluminium housing
- FLS and FLS ES: Cast iron housing

# ENERGY-SAVING

## THE COMPLETE, UNIQUE OFFER

The new LEROY-SOMER **high-efficiency** motors reduce both energy consumption and manufacturing costs. The reduction in absorbed energy and the increased life of motors result in substantial economies. The LS ES and FLS ES motor installation dimensions are identical to those of motors in the standard range, ensuring **interchangeability**.

**LEROY-SOMER has a complete and unique offer** consisting of motors specially designed to operate with electronic frequency inverters and speed reducers.

These product ranges are manufactured using basic technical principles, resulting in drive systems which are ideally suited to market requirements.

# ENERGY-SAVING

## for ALL APPLICATIONS

• CHEMICALS, PETRO-CHEMICALS

• INDUSTRY

• FOOD PROCESSING

• ENVIRONMENT, SANITATION

• IRON & STEEL,  
• PAPER & BOARD,  
• SUGAR  
REFINERIES,  
• INDUSTRIES :  
*Automotive,  
Textile,  
Timber, etc*

Increased efficiency  
of rotating machines

DRIVING

MOTORS with ALUMINIUM or CAST IRON frame, 0.09 kW to 750 kW

LS and FLS  
Standard  
Ranges

EFF 2

EFF 1

LS ES and FLS ES  
High-Efficiency  
Ranges

Increased overall  
efficiency of the installation

POWER  
TRANSMISSION

GEARED MOTORS

Gearboxes with helical gears such as COMPABLOC, ORTHOBLOC etc, with very high efficiency, are world leaders in the transmission market due to their very compact dimensions and low maintenance. These products contribute to **significant energy savings (25 %)**.

EQUIPMENT

VARIABLE SPEED DRIVES

Induction motors used in conjunction with speed drives can be optimised by adapting the speed, torque or power to the load: the power absorbed by the installation is therefore reduced. Variable speed control also presents an important opportunity for **savings in industry**.
